

Georgios-Christoforos Kazlaris

PhD Candidate · Researcher · Full-Stack Developer

Thessaloniki, Greece · [linkedin.com/in/george-christoforos-kazlaris](https://www.linkedin.com/in/george-christoforos-kazlaris) · Open Knowledge Foundation Greece · International Hellenic University

I completed my studies at the Department of Information and Electronic Engineering, International Hellenic University, in Thessaloniki. My thesis focused on developing Android educational applications for primary school students using augmented reality — work that later grew into peer-reviewed scientific publications. Today I work as a researcher and full-stack developer, with hands-on experience across Python, PHP, C#, and Kotlin, collaborating with the Open Knowledge Foundation Greece and with universities and companies across Europe on Horizon research proposals. In parallel, I am pursuing my PhD, researching educational applications of augmented reality.

EDUCATION

PhD Candidate — Computer Engineering

2024 — *present*

International Hellenic University · Department of Information & Electronic Engineering · Supervisor: Prof. Efkleidis Keramopoulos

Integrated Master's Degree — Information & Electronic Engineering

2016 — 2022

International Hellenic University, Thessaloniki · Computer Programming

EXPERIENCE

Research Development Software Engineer

Oct 2023 — *present*

Open Knowledge Foundation Greece · Full-time · Thessaloniki, On-site · Full-stack development (WordPress, PHP, Laravel) for research and open-data projects, and writing European research project proposals (Horizon and other programmes).

Military Service

Sep 2022 — Jun 2023

Hellenic Armed Forces · Évros · Administrative assistant supporting the unit's daily office operations.

Student Intern — Software Development

Oct 2021 — Apr 2022

FoodTec Solutions · Thessaloniki, On-site · Development work on restaurant & order management systems, using Kotlin among other tools.

PROJECTS

CyberKG — Visual Semantic Query Platform

An end-to-end pipeline that converts CAPE sandbox malware analysis reports into STIX 2.1 threat intelligence bundles and UCO/Turtle RDF graphs, stored in a Virtuoso triplestore and queried through a visual SPARQL interface.

Alignment — Semantic Matching Tool

An ontology-matching tool for the Semantic Web, built in collaboration with the Open Knowledge Foundation Greece, addressing heterogeneity across tools, vocabularies, and data sources. Built with Laravel and PHP.
